

Key

- ① Existing structural deck
- ② Sika Liquid Plastics Carrier Membrane [as part of the original installation over a timber deck]
- ③ Existing Decothane surfaces; thoroughly clean the area around every proposed penetration/application area using conventional means, rinse thoroughly to avoid residues and allow to dry
- ④ Sika Liquid Plastics Reactivation Primer applied in a minimum 200mm radius around each penetration
- ⑤ Proprietary photovoltaic fixing assembly to suit the structural deck type by others
- ⑥ Sika Metal Primer applied applied on to exposed aluminium tube
- ⑦ Decothane Base Coat applied at 1.0l/m² with embedded Reemat300 in a minimum 150mm radius around the penetration position
- ⑧ Decothane Top Coats as per ORIGINAL Sika Liquid Plastics Project Specification in a minimum 175mm [Base Coat must not be left exposed to UV]
- ⑨ Heavy duty tie wrap or O-clip applied to the exposed edge of waterproofing

Potential ingress point until PV units are installed

This drawing is solely intended to illustrate the correct application of Sika Liquid Plastics products and systems. It must be read in conjunction with the appropriate specification and current issue of relevant Product Data Sheets. All elements bearing reference to structural and/or thermal design are shown indicatively and should not be used in whole or in part for any aspect of project design without consulting the relevant authorities.

For refurbishment projects, all aspects of the existing roof are deemed to be fully compliant with BS 6229:2003 [Code of Practice for Flat Roofs with Continuously Supported Coverings] or improved upon for instances where these standards are not met.

Site-specific details not covered by our standard range can be obtained by providing relevant information to the email address shown.
