

## Sika Single Ply Roofing Membranes

### Sika Stops Leaks in Matlock Bath

The Pavilion Building in Matlock Bath had a failed roof, and a low cost solution was required. **Trocal S** was specified to overcome the difficulty caused by the irregular dome shapes of the building roof, and because it could be overlaid onto the existing roof.

A major attraction of the **Sika-Trocal** solution was the ability to ensure a very high degree of aesthetics by including a standing seam profile as part of the package.

Derby Dales District Council obtained a visually pleasing, low cost roof, requiring low maintenance, but providing a long life span.

### New Roof a Big Hit at Notts CCC

The roof of the new Fox Road grandstand at Trent Bridge, the home of Nottingham County Cricket Club, has been covered with **Trocal S**, a single ply roofing membrane.

The curved grandstand roof was an ideal application for **Trocal S**, because of its design flexibility and fast installation. Rain may stop play, but supporters will stay dry for many seasons to come!

## Forestry Commission

The Forestry Commission Building in Edinburgh has recently undergone a substantial refurbishment, including a new roof membrane from **Sika Limited**.

The building's asphalt roof was failing, and **Trocal S** was selected for its ability to be laid over the existing asphalt.

The building is an unusual banana shape, and the roof area has a large number of awkward details around plant and machinery, for which **Trocal S** is ideally suited.

**Trocal S** has provided a cost effective, watertight solution, to a failing asphalt roof with a minimum of preparation required.

## Sheffield School Sports a New Roof

The roof of the Firvale sports hall in Rusby Street, Sheffield, has recently been refurbished using **Sikaplan**, the **Sika-Trocal** reinforced membrane.

The existing asphalt roof was reaching the end of its serviceable life, and the replacement was required to meet a limited budget, have a life expectancy of 25 years, and because of difficult access, need low maintenance. Additionally, there was to be minimal disruption to school life during refurbishment.

**Sikaplan VG** was specified and mechanically fixed over the existing structure, which contained entrapped moisture. **Sikaplan** is vapour permeable, and allows excess moisture in the roof to escape, eliminating the potential blistering problems associated with bituminous overlays.

# Walmart Asda puts Sikaplan on Shopping List

**S**ikaplan single ply roofing membrane has been successfully installed on the new 65,000 square metres, Walmart Asda warehouse and distribution centre at Lutterworth near Rugby.

With costs, durability and speed of application a major consideration, this was the first time Walmart Asda had used a single ply membrane for a major distribution centre.

Despite adverse weather conditions, and enforced delays to the start of the project, the 65,000 square metres of **Sikaplan** was applied in nine weeks, which was well within the tight programme constraints of the client and their construction team.

# Tiers at West Point

**T**he roof of West Point in Lady Lawson Street, Edinburgh, has recently been refurbished using **Trocal S**. The client wanted the terrace areas to complement the magnificent views over Edinburgh Castle and the Old Town.

The project involved the waterproofing of four different tiers of the roof, incorporating a roof garden, timber decking and decorative paving slabs. By specifying **Trocal S**, the architects were able to ensure a watertight structure, able to accommodate the different roof terrace finishes required.

## New Tesco Store

**A**n almost derelict car auction property in Northam Road, North Shields, has recently been converted into a new Tesco store. Its irregular shaped roofing structure was refurbished by laying **Trocal S** over the existing roofing material.

The roofing team were set a deadline of just eight weeks to complete the 12,000 square metre project in order to meet Tesco's tight opening schedule. Overlaying the **Trocal S** membrane without stripping the existing roof covering, enabled other trades to work safely below.

## Gold For Trocal

Two important roofing areas at the Commonwealth Games Stadium in Manchester were waterproofed with **Trocal S** roofing membrane. Both the corporate hospitality boxes and access ramp towers were roofed with the mechanically fixed **Trocal S** membrane.

**Trocal S** was specified because of its proven track record for watertightness, and its fast application on site.

## Roof Pampering For Mothercare

Several leaking roofs have recently been refurbished at the Mothercare offices in Watford. New insulation was fitted over the existing roof, and this was overlaid with **Trocal S**, a single ply roofing membrane.

The 3,700 square metres were successfully laid during normal working hours, with minimum disruption to the staff.
