Roller Blind Systems

From functional to fashionable – this is the way roller blinds have developed over the years. Initially appreciated for their excellent shading qualities, now their unobtrusiveness and comfortable operation have made them into a favourite for today’s interior design. Their simple and clean lines are the perfect complement to modern architecture.

Whether very large or very small, hand operated or motorised, there is a blind to suit every window. Features such as the ultra-reliable decelerator, optional stop controllers and unique counter-balancing mechanism ensure Silent Gliss products offer a superior solution.

A vast range of fabrics, textures and colours ensures a beautiful look for all rooms and intentions.

Roman Blind Systems

Great versatility is the main characteristic of Roman Blinds. Different styles and fabrics may create strong fashion statements or underline the atmosphere of a room – it's a matter of personal choice.

Whether relaxed softfolds, more disciplined hardfolds, beautiful reefs or stylish on poles – Silent Gliss has a top quality solution for all styles.

Fabric options are almost unlimited. The customer can choose from a vast range of textures, patterns and colours from our own collections for both domestic and contract applications.

Sliding Panel Systems

Inspired by the East – Panel Glides epitomise aesthetic and individual window and room decoration. Colours, patterns, fabrics from sheers to opaque – anything is possible.

Fabric effects are stunning but Silent Gliss has even more to offer: The unique folding panel combines the beauty of panels with a striking 3D-look when folded. Exceptional elegance is the main character of this window decoration.

Whatever the intention is: a pure design statement, a decorative and efficient shading measure or both - Silent Gliss offers a made to measure solution on highest quality and design levels.

A wide range of high quality panel fabrics is available.

Venetian Blind Systems

Elegant and flexible - Venetian blinds remain the most versatile and unobtrusive window decoration.

Light and glare can be perfectly balanced through tilting the slats. Optimal light management is possible through Silent Gliss' special punching method.

Hand operated or motorised, the wide range of Silent Gliss Venetian Blind systems is available in aluminium or wood, with different slat sizes and styles including perforated.

The Venetian Collection offers almost unlimited colour options that meet individual taste and highest quality expectations.

Hand and Cord Operated Curtain Track Systems

Hand and cord drawn curtains are naturally elegant and leave a pure impression of fabric. Their great versatility lies in unlimited fabric, pattern and colour options.

Smooth, reliable and nearly soundless operation are the hallmarks of Silent Gliss curtain tracks. They cover all curtain weight requirements from the lightest sheers to stage curtaining. Most of the tracks can be bent to almost any shape or contour.

Why not consider the Silent Gliss Wave Standard or Wave XL Curtain Heading System - a contemporary alternative to traditional pinch and pencil pleat heading styles? The system encourages the curtains to hang in a smooth and continuous wave effect.

The Silent Gliss 1080 track is also used as a discreet and reliable picture hanging system, eliminating the need for holes in interior walls.

Electric Curtain Track Systems

Large windows and glazed areas are more popular than ever. For these, or difficult-to-reach windows, motorised curtain tracks are the perfect solution.

Whether for private homes, hotels, museums, conference or av rooms Silent Gliss systems can be individually operated, arranged in groups or incorporated into the building management systems.

Customers may chose from a range of operation alternatives according to their individual requirements, including fixed switch, radio or remote control, or both.

Vertical Blind Systems

Precision light, glare and privacy management can be as simple as pulling a chain or pressing a button. Vertical Blinds are most flexible systems that can accommodate virtually any application - regardless whether straight, curved or sloping.

To serve all window shapes and sizes Silent Gliss systems are made to measure. The wide selection of fabrics ranges from design driven textures to special requirement fabrics.

Silent Gliss, together with Swedish textile designer Eva Marmbrandt developed extraordinary and exclusive designs for Vertical Blinds: the Vertical Waves. Vertical Waves is a series of laser cut Vertical Blinds adjusted to the modern architecture, aiming to create more agreeable sound and light surroundings in public environments. Three designs are available: Andrea, Annika and Maria.

Vertical Waves are a perfect contemporary window treatment as well as an eye catching dramatic room divider.

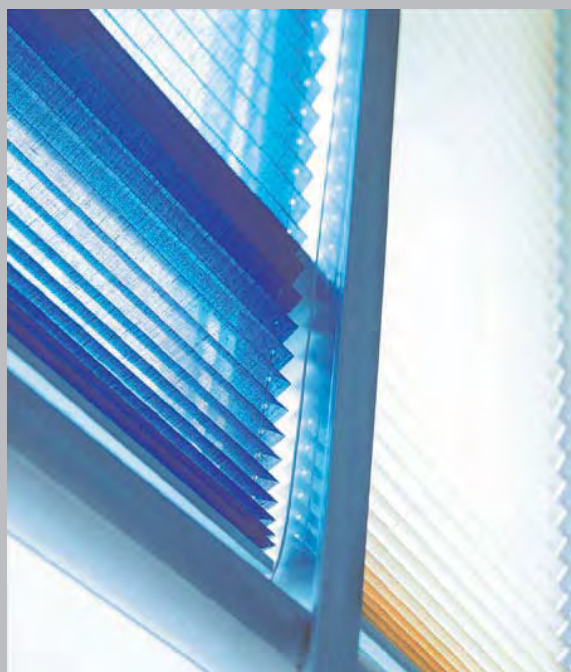

Pleated Blind Systems

Pleated Blinds combine simplicity and elegance with great versatility. They may be an inspiring window fashion or an unobtrusive shading measure of pared-down elegance.

The enormous range of shape and stacking possibilities make them ideal for windows of all shapes and dimensions.

An extensive range of colours and the choice of single and double fabrics guarantees the best look for all intentions.

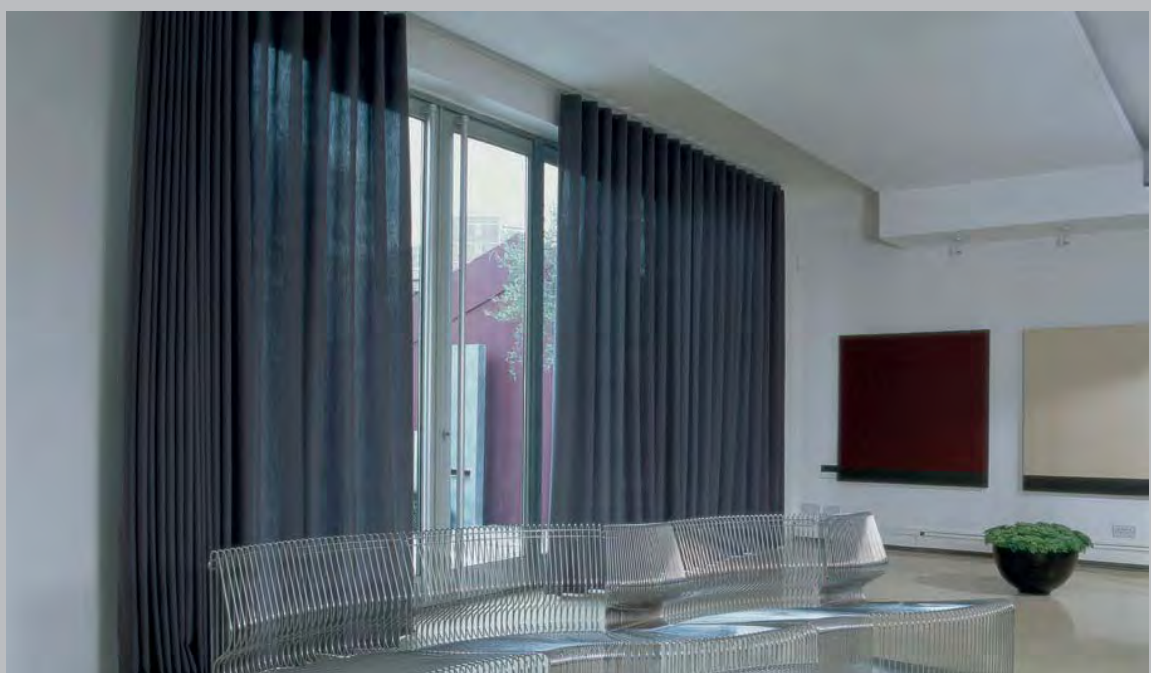

Decorative Curtain Poles

Curtain Poles are a decorative and individual suspension that can create stunning effects. The Silent Gliss Metropole range combines both the beautiful look of pole suspension and the functional advantages of curtain tracks - by using gliders that run inside the pole. The added benefit of Metropole is that it can be bent for bay windows and still functions perfectly!

The stylish and beautifully crafted finials and accessories underline or stress the design statement of the chosen curtains or blinds. The poles are offered in thirteen finishes, including wood effects and can be operated by hand, cord or motorised.

Skylight Shading Systems

Large glass areas are one of the architectural passions nowadays. Intelligent shading solutions for conservatories, domes, atriums and other glazed areas are an absolute necessity.

Silent Gliss Wintergarden Systems are guided Roman blind systems. Available hand operated or motorised, the superior hardware and virtually any fabric guarantee shading tuned to individual needs and desires.

The Silent Gliss Skylight system is a worldwide unique solution to glazing large areas. The parallel fabric panels can be moved to provide an innovative and very elegant way of shading. Maximum light and glare management is guaranteed through gradual tilting of the fabric panels.

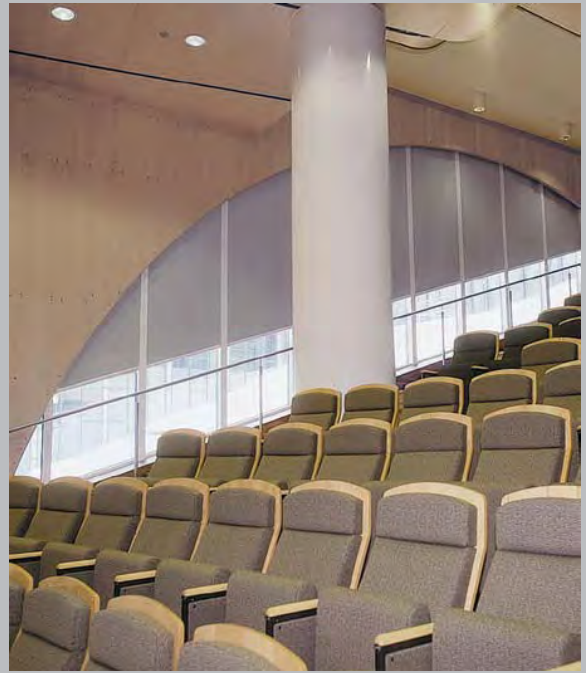

Dim-Out Blind Systems

Offices, schools, laboratories, private homes - wherever maximum light exclusion is needed Dim Out Blinds are an ideal solution.

The Silent Gliss range comprise vertical, horizontal, sloping and multiple systems to meet exact requirements. By combining high functionality and reliability they are able to offer discreet systems in proportion to the window's dimensions.

All Dim-Out fabrics are sealed and riveted and most fabrics are flame retardant.

Room Divider / Cubicle Track Systems

Cubicle Tracks are the most efficient and cost effective way of dividing a room into separate private areas. They are most commonly used in hospital environments and for shower applications but can also be used for a variety of industrial and other separation requirements.

Silent Gliss Cubicle tracks are the most widely specified and installed systems in Europe, they are technically advanced with many safety and hygiene features and guarantee durable and reliable operation.
