

# Radiant Heating & Cooling Solutions

## Glynn Vivian Art Gallery, Swansea

Solray prides itself on its ability to design, manufacture and install custom radiant panels to suit individual designer and client needs.

With its own factory and design offices in Swansea, Solray can supply and install bespoke radiant panels to suit any requirement.

With a highly trained technical and engineering team, Solray provides optimum design solutions, quality products and reliable installation without the need to use external resources.

A good example of this is the Glynn Vivian Art Gallery in Swansea.

The Glynn Vivian Art Gallery reopened in October 2016, following its major redevelopment. The project has transformed the Gallery's original 1911 Grade II listed building while conserving and celebrating its original character, providing a welcoming, new and refreshed 21st century visitor experience. Solray's role in this transformation was to provide the heating for the Atrium Gallery. The Architect wanted to try and integrate electric radiant heating panels into the space by building the existing columns out so that the panels did not protrude into the space. Following some design meetings with the consulting engineers Solray designed a custom made bracket to use with an 8mm pin welded to the panel to allow the panels to be mounted onto the columns and walls throughout the Atrium Gallery area without any visible fixings. The panel itself was only 25mm deep which ensured that it didn't stand out and blended in to the aesthetics of the gallery.

## Some of the benefits.....

- **Clean, maintenance free products** - No upkeep required
- **Highly effective** - Radiant Effect = Instant heat
- **Unobtrusive** - Free up wall space for other services
- **Longevity** - Guaranteed for up to 25 years
- **Hygienic** - Less dust and air movement than conventional heating systems
- **No boxing in required** - Pipework located in void so is always hidden.

## More on Solray panels.....

Typically running on a LTHW heating circuit but also available for steam, electric or chilled water, the Solray panels provide optimum heat distribution to deliver high performing panels while also providing cost savings compared to convective heating systems.

We've been in the business of manufacturing radiant panels for more than 80 years; a testament to the quality of the products and services we offer.

We offer standard panels as well as completely bespoke items for special or listed applications.
