

# INTRODUCING MESSAGEMAKER DISPLAYS

Your personal LED signage experts.

Innovation is at the heart of everything we do. Every single new product we launch is carefully designed to ensure they are all easy to install, easy to programme and easy use with minimal maintenance required.

The current range includes a vast variety of LED signs and displays including vehicle activated speed signs, LED Message displays and mobile speed signs. The latest product is the Tower Unit, a one of a kind traffic management sign solution.

Our support does not stop after the purchase, our engineers remain on-hand for both remote and on-site technical support and your Account Manager is there for any query you may have before.

MessageMaker Displays is part of Stocksigns Ltd which allows us to combine all the years of experience in the traffic management and signage industries, which is why we are able to offer you such an exceptional service and product range.

For more information please contact 01737 774747.

## LOST TIME INJURY BOARD (LTI)

A popular product within the manufacturing and construction industries, the LTI Board is a bold and effective communication tool to help lower the number of accidents in the workplace.

By keeping track of accidents and openly sharing this to all staff and visitors everyone is in the loop and made aware of the importance of working safely.

Both the Indoor and Outdoor models are available from stock.

# LED SIGNS AND DISPLAYS SPECIALISTS

## VEHICLE ACTIVATED SPEED SIGNS SID, SAM, SLR

Our range includes three types;

Speed Indicator Device (SID), Smiley Activated Message (SAM) and SLR (Speed Limit Reminder).

These signs are effective speed calming tools often used on local roads and large industrial sites.

All three signs use the latest LED technology for low power consumption and have a 5 year warranty and are available from stock within 5 working days.

All three signs are available as battery, solar or mains powered and also have the option for Data Capture which allows to record and evaluate traffic data.

*Please Note: The SAM is only suitable for use on private roads.*

## TOWER UNIT

The Tower Unit is the first of its kind in the traffic management industry. With a small footprint and easy manoeuvrability the Tower Unit is the ideal alternative to Mobile VMS Trailers. Multiple units can be transported at once thus lowering cost and time to deploy temporary road-side signage.

## LED MESSAGE DISPLAYS

This is where MessageMaker Displays all began. The range of indoor and outdoor displays can be used in all types of industries for all types of uses due to their flexibility and big capabilities.

The signs are often used in warehouses, industrial fridges, shop fronts and depots and more recently used for COVID-19 communications.

## 20MPH URBAN VEHICLE ACTIVATED SPEED SIGN

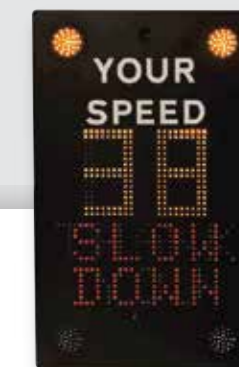

With many urban areas in the UK setting 20mph speed limit a LED sign can often catch the driver's attention more than a static printed sign, which is where this sign comes into play.

## DUAL MESSAGE WARNING SIGN

This vehicle activated speed sign shows the speed of the oncoming vehicle with either a "SLOW DOWN" message in red with flashing amber wig-wags in the corners for those over the speed limit, and a "THANK YOU" message in green for those under the speed limit.

A simple yet effective traffic calming solution suitable for private and public roads.

## MINI UNIT

Available with either a full colour VMS or Vehicle Activated Speed Sign, the Mini Unit is ideal for temporary road work, events/crowd control and for community safety measures. The small size enables one person to fully deploy at a time, and the mobility allows for the sign to be used wherever needed.

## MOBILE VMS TRAILERS

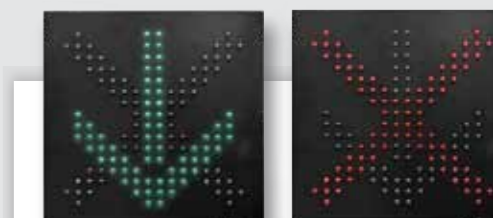

There are three sizes in this range to accommodate every type of road and every intended use. Key features include a full colour and energy efficient VMS screen, GPS tracking and an easy to use content management software.

## VEHICLE ACTIVATED WARNING SIGN

A flexible sign which can be used for whichever application required. The "SLOW DOWN" and flashing amber wig-wags activate for speeding vehicles.

The printed road sign can be any TSRGD symbol of your choice, such as school crossing, give way, double bend and more.

## LANE CONTROL CROSS ARROW

Usually seen above tunnels, these signs are commonly used above loading bays or industrial site entrances. This sign is a simple, switch activated sign for lane control.
