

ORION hypar RP™
› waterproof fabric canopy systems

Product Dimensions :

Triangular, square or free form shapes in single, multiple or overlapped configurations with standard module dimensions from 4m x 4m to 7m x 21m as single unit.

Précontraint®502 fabric from Serge Ferrari

- › A composite textile membrane consisting of a high tenacity polyester base cloth covered with a high performance polymer coating. Serge Ferrari® Précontraint® technology consists of applying a PVC coating under tension.
- › Uniform translucency optimizes natural lighting.
- › Highly concentrated anti dirt-resistant surface treatment.
- › Exceptional resistance to UV and extreme atmospheric conditions.
- › 100% recyclable using the process Taxyloop®.
- › 5 year fabric warranty.

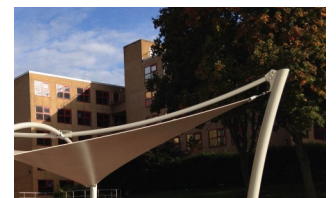

Product Overview :

ORION hypar RP™ waterproof tensile canopies from Streetspace utilise the hyperbolic paraboloid sail design combined with radius posts, it achieves its form by diagonally raised opposite corners of a cover to create twist. This not only produces a beautiful shape but the opposing tensions keep the sail tight, even with large spans.

Featuring a braced canopy frame design crossing over the top of the tensile fabric ORION hypar RP™ offers superior value than conventional waterproof fabric canopies together with superb aesthetics. An unbeatable combination.

The all-steel framework is manufactured to the structural requirements of BS5950 with either galvanised or zinc prime and polyester powder coated to standard RAL colour of your choice.

We use 316 grade stainless steel for all tensile fittings and cabling and all of our waterproof ORION hypar RP™ tensile canopies use the well proven Précontraint® 502 fabric colour options from Serge Ferrari® for the best textile dimensional stability and long life.
