

### European Scanning Clinic, Harley Street, London

Stretch Ceilings were commissioned to supply and install a Non PVC Matt White Membrane in the CT scan room at the European Scanning Clinic in Harley Street, London. The clinic uses the world's most advanced CT scanner and is the only independent healthcare clinic in the UK that uses such state of the art equipment.

Initially Stretch Ceilings were commissioned to install a White Translucent Membrane however because the Translucent Membrane required heating during its installation it was unsuitable as the heat would affect the equipment. Therefore another material was selected from Stretch Ceilings new world leading range, specifically the Non PVC Matt White due to the stable nature of the fabric and the ability to be installed at room temperature.

The Non PVC Matt White is impressively light reflective and solid in appearance; it was especially interesting as the material can be finished in an anti-bacterial coating making the product extremely hygienic and easy to clean.

Colour changing LEDs were used at close proximity behind the Membrane to create accent lighting providing a focal point on the ceiling. Fluorescent T5 lamps were up lit onto the perimeter of the material which was reflected back down into the room for functional and atmospheric lighting. The overall effect of the lighting was to provide a welcome distraction to the patients and soften the room environment.

Stretch Ceilings Non PVC fabrics are available in a range of colours, textures and light diffusers including printed and anti-bacterial options. The Stretch Ceiling system offers the same diverse opportunities of creating simple, flat ceilings or curved, shaped features and comes with our industry leading 12 year guarantee.
