

SURECAV®

CAVITY SPACER SYSTEM

SUSTAINABLE

ECO-FRIENDLY RAIN-SCREEN

Using injection-moulded 100% recycled polypropylene.

SureCav's drive to help the environment continues with the news that we continue to save waste polypropylene from going to landfill!

Just see what we have accomplished!

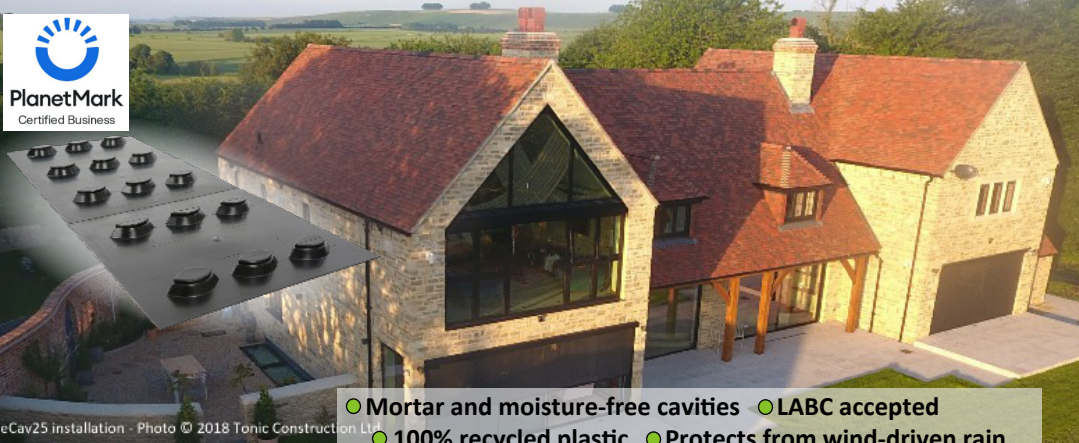

SureCav has helped to protect the environment by using over 1,840 tonnes of 100% recycled plastic.

SureCav has *replaced* the equivalent of 7.4 million concrete blocks. That's approx. 6,800 lorry loads and 136,000 tonnes of concrete!

The equivalent for SureCav would be just 236 lorry loads!

The environmental benefits don't stop there. SureCav continues to ensure that cavities remain mortar and moisture-free, thus protecting the fabric of the building. Now, with SureCav25, there is room in the cavity for more insulation, helping to prevent heat loss and driving down U-Values even further. See more at surecav.co.uk today!

SureCav25 installation - Photo © 2018 Tonic Construction Ltd

- Mortar and moisture-free cavities
- 100% recycled plastic
- BBA certificated
- LABC accepted
- Protects from wind-driven rain
- 25mm or 50mm deep
