**Main contractor** South Wales Concrete Pumping

**Location** Penderys Street, Cardiff

**Date of completion** 03/2016

*Tarmac's customer was looking for a concrete flooring solution for a project that had challenging access issues.*

### THE CHALLENGE

The customer approached Tarmac as they were looking for a concrete flooring solution for a project they were undertaking in Cardiff. Their client needed to lay a mezzanine floor but there was limited access to the area.

Because of access issues, it wouldn't be possible to power float the material so the proposed solution would need to be pumpable, easy to place and self levelling. A high quality finish was also required.

### OUR SOLUTION

We offered our client Topflow - a highly fluid, self-compacting concrete. It can be poured quickly, flowing and spreading effortlessly to provide an exceptional, highly aesthetic finish. Because Topflow does not need any compaction or vibration, this also means that noise on site is reduced, improving conditions on site.

### RESULTS AND BENEFITS

Tarmac supplied 90m<sup>3</sup> of Topflow which was delivered, placed and finished within 4 hours. The product was pumped and placed with ease and did not require any vibration.

The customer was provided with an excellent, smooth surface finish that was perfect for the job. This product enabled the customer to complete the job with ease and minimal fuss.
