

Digital Printing On Glass

Digital ceramic technology is the most advanced and versatile glass printing. The perfect way for interior design and exterior architectural glass, marine, appliances and artworks. A permanent product created by applying ceramic inks on the glass surface and then firing in a furnace to encapsulate for the life of the glass.

 <p>The inks do not contain heavy metals</p>	 <p>Reduce ink waste</p>	 <p>Anti Bird Collision</p>	 <p>Glaze Reduction</p>
 <p>Light and Heat Control</p>	 <p>Local & Less Transportation</p>	 <p>Local & Less Transportation</p>	 <p>TG Energy Efficiency Calculator</p>

The ceramic inks are applied up to 720dpi resolution obtaining clear and defined images. When fired at approximately 650 °C the product is virtually non-destructible and therefore suitable for almost any application internal or external. The final product is also resilient against surface or chemical damage with permanent UV stable colours. Our in-house graphic design team are available to assist in getting your artwork correctly applied and set out on the panels required being one or multi panelled across a facade.

Toughglaze UK have launched a range of brochures full of inspiring designs for digital image on glass. High quality surface images and patterns can offer an incredible result, either you use them for internal or external applications.

For more information and further insight into our world of glass, kindly get in touch with us and our team of professionals can assist you accordingly.
