

Door UX 450

The UX 450 door is designed to be used with the UX 450 mesh panel and is suitable for storage areas with already reasonable outer protection. UX 450 padlock door has a specially-designed cover to protect the padlock hasp, making it difficult for thieves to get at the lock. The door leaf has a 30x20 mm steel tube frame and two horizontal tubes to create strength and stability. The 50x50 mesh aperture also makes it virtually impossible for a hand to reach through the mesh. Doors are supplied pre-assembled, ready for installation

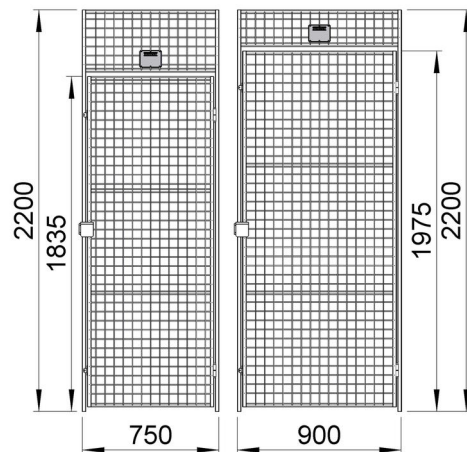

FACTS
