Videx Expands Presence in Student Accommodation Market with University Development Win

Videx, the experts in door entry, has won a big contract to provide a robust access control solution to a brand new student accommodation development in Newcastle upon Tyne. The development, which will welcome its first residents this week, will provide 123 student flats in Clavering Place, a prime location in the centre of Newcastle for those choosing to study and live in the city.

Talking about the project, Steve Natton, Projects Manager at Videx, said: "In partnership with our installation partner, SMT Electrical, we have installed our leading VX2200 digital door entry system to ensure the safety and security of students but also allow easy and convenient access. We provided a high level of support throughout the project so that each stage of the installation went smoothly and any challenges faced were addressed and quickly overcome. All of the client's requirements were met and their objectives achieved with the new door entry installation."

The scheme has been designed by Newcastle based Intersect Architects to be 'best in class' in terms of accommodation in the city and will provide larger than average rooms in a mix of self-contained studio units and en-suite bedrooms in cluster flats, with a range of amenity space including a large communal lounge, study room, television room and gym.

VX2200

Our most versatile system

The Videx VX2200 digital system is the most "versatile" system in the range, because it is flexible enough to cater for a variety of installations: from 1 way systems to larger systems that include a maximum of 1000 apartments.
