

An Introduction To

sivalbp®

pôle de valorisation bois

Sivalbp the company

This ultra modern production facility based in the South of France combines the latest technology in wood processing technology, with high quality pre-coating preparation and sophisticated environmentally friendly coating methods to produce a range of coated products that are both high performance and aesthetically pleasing.

Many profiles can be secret fixed, avoiding visible nail heads and protecting the integrity of the coating. The company also supplies products for internal as well as external use and profiles can be supplied in a range of surface finishes including - Smooth Sanded, Brushed, Fine sawn and Planed.

Environmental

At every process, the highest degree of care is taken from the correct drying of the timber, through to the selection of quality solid material, which also includes material optimisation through finger jointing to produce long lengths and to control wastage. Any 'rejected' materials are converted into fuel, which is used by the site to provide power for production purposes.

Many products are supplied end-matched to not only reduce installation costs but also material wastage on site. The species that are used are all PEFC certified and with our BM TRADA audited chain of custody, provide evidence of sustainability, right from the forest to the final destination.

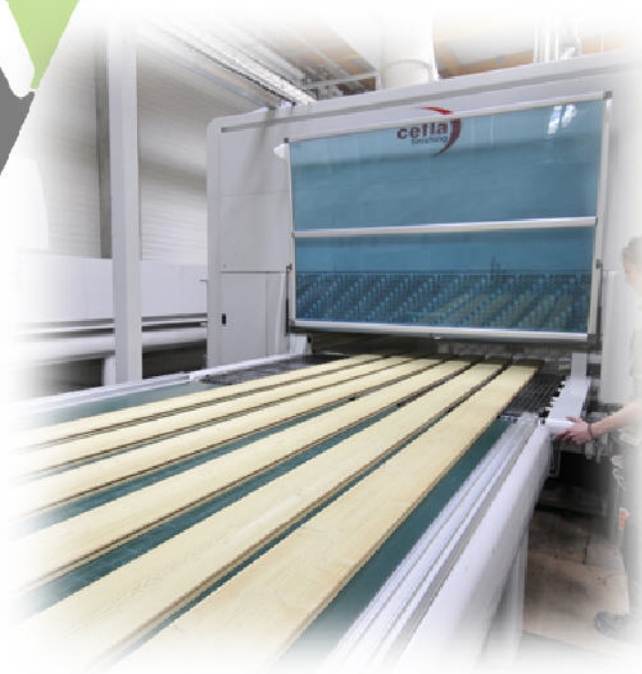

Infineo Products

We currently offer Western Red Cedar, European Mountain Larch (grown above 1,000m) and Nordic Spruce coated products, many come with guarantees and are available in a range of profiles, surface textures and coating finishes.

Vincent Timber Ltd
8 Montgomery Street, Birmingham B11 1DU

Tel - 0121 772 5511 Fax - 0121 766 6002 www.vincenttimber.co.uk enquiries@vincenttimber.co.uk

Finishes

Western Red Cedar is supplied in Natural Oil and Grey (pre-weathering stain)

Mountain Larch is supplied in Natural Oiled and Grey (pre-weathering stain)

Nordic Spruce can be supplied in a range of 14 opaque colours, with bespoke colours available subject to minimum order volume.

All coatings are applied in a fully automated and controlled factory environment.

Guarantees

Natural Oiled products (Cedar or Mountain Larch) comes with a 5 year coating guarantee

Grey (pre-weathering stain) - This is a sacrificial coating designed to protect the wood in the early years, which allows natural weathering to erode the stain and replace it with a more attractive effect, an effect that cannot be achieved by allowing natural timber to weather down.

This product does not come with any guarantee.

Nordic Spruce - **Opaque coated product** comes with a preservative treatment and a 10 year coating guarantee.

Philosophy

The aim of this company is to produce a range of products that are high performance, aesthetically pleasing and environmentally friendly through a combination of timber knowledge, respect for the material itself and control of operational impact on the environment.

This includes a short supply chain whenever possible, an ecological designed production site including the use of natural lighting, onsite rainwater collection, reduction in product packaging, control of air conditioning by optimal orientation of the buildings and the saving of fossil fuels thanks to self subsistence in energy by the burning their own waste.

sivalbp Colors

An Introduction To

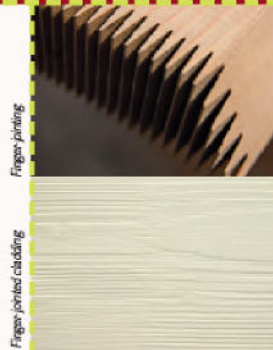

Sivalbp profile, technically design

SIVALBP Finger Jointing Fixed length

The Sivalbp finger-jointing process removes the main defects of the wood allowing:

- An easy fitting thanks to the Straightness of the board
- A clear and beautiful aesthetic aspect
- Improved strength and stability
- A better lasting finish
- 100 % of usable boards
- Fixed length of 4,40 m

Nordic spruce

Sourced in the slow growing and sustainable Scandinavian forest, it's selected for its fabulous texture, quality and availability. Easy to coat, it offers natural advantages of stability giving an excellent support for external fully finished cladding.

➤ Specie

- Nordic spruce from Scandinavian sustainable forests, PEFC certified

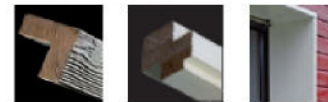

➤ Sivalbp wood processing

- Kiln drying to 16%±2 moisture content guaranteeing the stability of the cladding and a better coating quality
- Finger-jointing which removes the main defects, ensuring a constant straightness and the absence of distortion of the boards in the time
- Slow brushing process which gives an optimal and textured surface perfect for a qualitative coating. It brings out the natural grain and increases durability of the paint
- Class 3 preservative treatment, Green Label and CTB B+ certified.
- Opaque paint finish:
 - acrylic water-based paint, breathable and UV-resistant
 - industrial quality finish applied under strictly controlled factory conditions, ensuring consistent and uniform application.
 - application of a finish in the reverse side ensuring a good balance and a maximum protection from humidity
 - 10 year finish guarantee

➤ Installation and maintenance

- Sivalbp Colors is a finished product that requires care in installation (See Sivalbp installation details)
- All the cuts must be painted with Sivalbp colors matched touch up paint
- Finish Guaranteed without coating maintenance for 10 years
- It is recommended to wash by wiping about twice annually
- After 10 years, and if necessary:
 - clean and brush slightly the surface.
 - apply 1 to 2 coats of Sivalbp-Colors paint

➤ Accessories and trims
