Graph.

Design: Jehs + Laub

Matching conference solutions. Superbly designed conference seating is hard to spot. But locating matching combinations of tables and chairs is an even greater challenge. This is where the Graph conference range scores top marks. Because the distinctive, multi-awardwinning seating concept is cleverly reflected in the table systems. The result is good design and outstanding quality across the board.

Icons with innovative comfort.

Wilkhahn

Integrated design. Classy spans. Diverse formats.

The curved and flat profile of the sloping table legs continues seamlessly in the aluminium underframes. Light lines materialise, suggesting the frame is formed from one single component and conveying the impression of weightless elegance. Although a modular system, each configuration looks like a dedicated design.

Multi-media equipment is virtually concealed behind the underframes, but is still easy to access due to fold-away cable channels.

Intelligent glides.

Specially developed single table portals can be optionally integrated into the wood-based table tops. The edges of the segment cut-out and the portal are chamfered in opposite directions so that the gap for the leads looks closed.

Glass top, thickness 10 mm (3/8")

A close-up photograph showing the edge of a clear glass top. The glass is transparent, revealing a light blue tint on the underside. The edge is smooth and slightly curved.

Edge symmetrically curved, table top thickness 26 mm (1")

A close-up photograph showing the edge of a dark-stained wooden table top. The wood grain is clearly visible, and the edge is smoothly curved.

Integrated design. Classy spans. Diverse formats.

- The tables reflect the distinctive, multi-award-winning design of the Graph chairs. The options for combining tables and chairs from one range create an impressive ambiance at a consistently high standard of design and quality.
- The symmetrically curved table edges on the wood-based table tops are especially elegant and their look and feel appealing.
- Despite its distinctive appearance, a wide range of table top formats and surfaces mean that Graph can match specific design concepts and different numbers of people.
- Table tops that project far and large spans add up to generous table surfaces with few legs. As a result, a high level of comfort with maximum leg room is achieved.
- Specially developed single table portals and cable channels offer numerous opportunities to integrate multi-media. Multi-media equipment is virtually concealed behind the underframes, but still easy to access due to fold-away cable channels.
